

ARIZONA DEPARTMENT OF AGRICULTURE

Agricultural Consultation and Training Program

Pesticide Safety Training Services

The Arizona Department of Agriculture's, Agricultural Consultation and Training (ACT) Program provides a variety of services to help the ag community comply with the Worker Protection Standard (40CFR Part 170). Among the services is FREE pesticide safety training in English and Spanish for pesticide handlers and agricultural workers.

Pesticide Handlers are people who mix, load, or apply pesticides as well as those who repair or clean pesticide application equipment.

Agricultural Workers perform tasks such as pruning, irrigating, weeding, planting and harvesting in areas where pesticides have been applied in the last 30 days, but do not work directly with pesticides.

Effective January 2017, Pesticide Handlers must receive training on the safe and effective use of pesticides and Agricultural Workers must attend general pesticide safety training each year.

If you are interested in scheduling a pesticide safety training for agricultural employees at your operation, contact Jennifer Weber at the Arizona Department of Agriculture's, ACT Program.
