Renewal:
 Aim EC (#279-3241) chemical thinning lettuce

Discussion of some label corrections that need to be made. This product can be toxic to several aquatic species and we need to ensure no runoff. Our general statement as appropriate relating to water will be added. It was also noted that in the Yuma area where this is primarily used, the ground is all laser leveled so runoff generally will not be a concern. This AI is on the GWPL so the statement relating to groundwater will be needed.

With the above being addressed on the label, a motion for a 5 year renewal was made by Bill McCloskey, second by Jeff Boydston. Unanimous approval.

M1840 Growth Regulator (#524-651) Bayer greenhouse corn seed production

Issues raised for clarification on the label. 1) Need to ensure there are understandable mixing, loading and use instructions since there is no master label to refer to. 2) Need to ensure that the most recent and appropriate PPE requirements are on the label, gloves were the driver. 3) This is a persistent product and clarification is needed as to the potting media and what can happen with it.

With the above being addressed on the label, Peter Ellsworth moved 5 year renewal, Bill McCloskey second. Unanimous approval.
